## Facial Aesthetics at Linda Greenwall & Associates

Linda Greenwall & Associates are excited to welcome Dr Tara Tricot to the team.

Dr Tricot is a GP with a specialty in Dermatology and a special interest in Facial Aesthetics. Having trained at UCL medical school and now working both privately and within the NHS, she has a wealth of experience in Primary care, Dermatology and Facial Aesthetics.

Dr Tricot offers consultations to create a bespoke treatment plan tailored to you and your requirements. Dr Tricot strives to achieve a natural outcome giving you a

fresher and more rejuvenated look.

Dr Tricot also provides Botox for TMJ, Tooth grinding, Migraines and profuse sweating.

Dr Tricot works with us every Tuesday morning. Please call us to schedule an appointment.

## Orthodontic Scanner

Dr Ian Arad our in house Orthodontist will use the Itero scanner to take a scan of your teeth. The scan will be sent to Align technology where they will work alongside Dr Arad to create a beautiful smile. They will make a detailed plan of how your teeth will look when the Invisalign treatment has been completed. This process is called Clincheck, and will be presented to you before the treatment commences.

Dr Arad is here with us on alternate Thursdays and Fridays. Please call to schedule an appointment.

## Hygiene Services

Research is backing up observations that bacterial infection and tissue inflammation in the mouth can be a factor in the development of diabetes, heart disease, stroke, and medical problems. Diane, Rosanna and Sophie our hygiene team are on hand to help our patients maintain a good level of oral health to help prevent inflammation and disease. If we notice any changes in your gum health then Dr Horwitz our periodontist will be available for his expert advice and treatment.

## Smile Makeover

Dr Greenwall is always at the forefront of the changes in dentistry and has always maintained that minimal invasive dentistry (keeping as much of your natural tooth as possible) is the best option of treatment.

Smile makeovers have never been more in demand and in the past porcelain veneers were placed to create the perfect smile, now there are new techniques available.

We start by designing the smile, where the ideal shapes and size of the teeth are created in wax. If you are happy with these, we make them in plastic and add to your teeth so you can see the results. We then have a stent and matrix made up from these.

The bonding material will be injected into the stents, and this is then placed on your teeth and then set. The stents are removed and the bonding's are then polished.

The final results are exceptional and the bonding's are easy to maintain.

Below is the step by step process for a smile make over with injectable composite. If you wish for more information or would like to schedule a consultation please contact the practice.

Smile before bonding and whitening

Shapes are made on a model in wax

Design is made in plastic on the teeth

A matrix stent is made of the shapes

The material is injected into the matrix

The stent is applied to the teeth and the material is set. The bonding's are then polished

The smile before treatment

The smile after treatment
